

Press Release April 16, 2014

Adaptive shaft alignment with the new tool Fixturlaser EVO

Fixturlaser has developed a new shaft alignment tool, Fixturlaser EVO, which features our unique adaptive user interface. The tool's simplicity in its handling is characteristic for all Fixturlaser tools; an alignment tool that can be handled by all maintenance professionals, and not only experts.

Few features in the shaft alignment world are as innovative and time saving as the VertiZontal Moves. Its adaptive interface shows how much a misaligned machine requires for the vertical move by adding or removing shims at the machine's feet. Proceeding with the measurement, it requires no remeasurements in between vertical and horizontal adjustment during the alignment process. The horizontal adjustment is promptly carried out with real values displayed during the entire process.

The Fixturlaser EVO is an all-digital shaft alignment tool with wireless, built in Bluetooth in the sensor units. The units are also fitted with a 30 mm CCD detector that gives the user an unparalleled measurement accuracy and precision.

The Fixturlaser EVO offers a compact display unit with a 5" color touch screen. It is slim and balanced, allowing you to hold it in one hand, leaving your other hand free to touch the screen icons and rotate the sensors on the shafts.

"We do not dare to claim that we match Albert Einstein's genius, as we quote him: "Everything should be made as simple as possible, but not simpler." says Hans Svensson, CEO of Elos Fixturlaser AB. "We will, however, claim to be the most innovative in our efforts to make the life of maintenance professionals as problem-free as possible."

ELOS Fixturlaser is a global player and leader in developing innovative, user-friendly equipment for shaft alignment. By helping industries worldwide to become perfectly aligned, and eliminating anything that might not be, we minimize unnecessary wear and production stoppages. This will ultimately make our customers more profitable and our environment more sustainable.
